

Sound Building Supply Manufactures all of their Metal Roofing and Construction Products

“Manufacturing gives sharp edge to Sound Building Supply in quality of product, excellence in service and lifetime warranty”

Renton, WA—(July 11, 2012) – Sound Building Supply (SBS), a Washington State building supply company, celebrates their 34th year of service. While many building supply companies are basically resellers of third party products, SBS manufactures all of their metal roofing and metal construction products in addition to selling other manufacture’s building products.

“By manufacturing in-house, we have control over the product, flexibility to customize, and are able to provide world-class support along with sound lifetime warranties,” said Darrel Wilkins, General Manager for SBS. “We sell to wholesalers; we always maintain the integrity of our distribution model. Roofers and consumers who call us, or walk through our doors, are referred to a wholesaler,” Wilkins added.

Metal Roofing (Sound-Lok)

Sound-Lok metal roofing is versatile roofing that will not crack, shrink, chip, attract moss, rot or erode. Minimal maintenance is required. It is noncombustible and meets building and fire codes. Despite its light weight, Sound-Lok is environmentally friendly and is 100% recyclable. In the Pacific Northwest, year round weather can vary greatly, testing even the toughest roofing materials on the market. The Sound-Lok metal roofing system is backed by the SBS limited Lifetime Warranty which is second to none in the industry. Whether you live on the Coast, Puget Sound or the Alpine areas, Sound-Lok Metal Roofing will provide you with a dependable, attractive and environmentally sound alternative to composition, slate or tile roofing materials.

The Sound-Lok concealed fastener standing seam roofing system is well suited for residential and commercial roofing applications where durability, long term energy savings and aesthetics are primary considerations. Although equally strong under most conditions, we leave the choice of the size of the panel up to you. Some of the long-term benefits of metal roofing are, longevity, lighter structural load, increased fire resistance, greater color choices and its environmentally friendly product. SBS takes pride in providing wholesalers the best service, highest quality metal roofing and an extensive line of accessories.

Special Fabrication

The SBS special fabrication department manufactures specific ventilation, water infiltration and roof drainage components. Special Fabrication was developed at SBS to ensure that every odd application and strange scupper was accounted for in the building process. Whether you have a difficult area to flash, a corner and saddle that seems impossible, or an old and existing collector box to match or remake, SBS has you covered! Solving problems that seem impossible is this department's specialty and we take pride in helping find a solution to strange and out of the ordinary flashing scenarios.

SBS services Washington State, Alaska and Oregon for now. The customer service level is high at SBS and the company itself is a great place to work, validated by the noticeable low turnover rate. Even Darrel Wilkins began working for SBS when he was 18 years old in the warehouse and 20 years later is the General Manager. Darrell knows the SBS product line like the back of his hands. In fact, the experience level of all SBS employees helps SBS to remain a quality company from all angles. The longer employees work there, the more skilled they become. The more skilled they are the better the product, productivity, and end result.

Sound Building Supply is always on the lookout for additional quality wholesalers that appreciate responsive manufactures with quality products.
