The Sound-Lok™ concealed fastener standing seam roofing system is well suited for residential and commercial roofing applications where durability, long term energy savings and aesthetics are primary considerations.

Although equally strong under most conditions, we leave the choice of the size of the panel up to you.

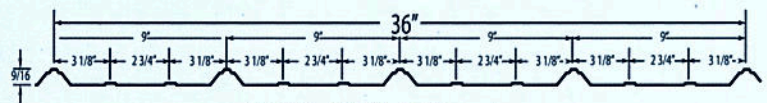

Some of the long-term benefits of metal roofing are; longevity, lighter structural load, increased fire resistance, greater color choices and its an environmentally friendly product.

We take pride in providing you the best service, highest quality metal roofing and an extensive line of accessories.

Questions regarding proper roof maintenance, color fading, installation techniques, fastener recommendations, color availability, roof delivery, energy star rating, low slope pitch calculations and applications, oil canning (possible when processing steel into metal panels), ventilation information; please speak with your sales representative or contact Sound Building Supply.

Tuff Rib

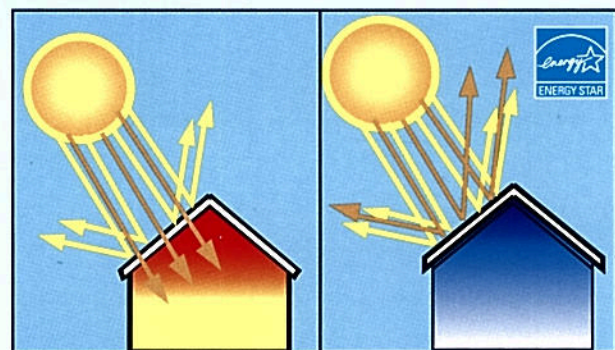

36 inch coverage exposed fastener panel system, available in 29 gauge Galvalume or G-90 galvanized steel with SMP(Silicon Modified Polyester) finish.

36" Tuff Rib™ Panel

The Tuff Rib™ exposed panel system features a 36" coverage panel that is suitable for either roofing or siding applications. Tuff Rib™ panels can be installed over purlins, over sheeting, or skip sheeting. For siding applications, a purlin spacing of no more than 36 inches is recommended, and roof applications, a spacing of no more than 24 inches on center.

Tuff Rib™ panels also provide similar long term benefits that include less weight on structure, improved fire resistance, numerous color choices and an environmentally friendly product. A Sound-Lok™ or Tuff Rib™ roof, if properly installed, will provide many years of service with a minimum of care and maintenance.
